STARVIS

Your personal Eagle Eye on the road

A dash cam is an on-board camera that continuously records the view through the vehicle's front windshield. The recorded footage can be used as evidence in the event of a road accident. When parked, dash cams can capture video and picture evidence if vandalism is detected. Alpine offers a high-end dash cam that includes drive assist functions, as well as regular recording model. There are optional rear accessory cameras available for both models.

ALPINE ADVANCED DASH CAMS

DVR-F800PRO

ADVANCED DRIVE-ASSIST DASH CAM

- 1080p Full HD recording • Sony Exmore image sensor • Excellent night image quality • Driver support features • Built-in GPS • Includes 32GB micro SD card

RVC-R800

REAR ADD-ON CAMERA FOR DVR-F800PRO

- Compatible with DVR-F800PRO • For rear surveillance while driving and in parking mod

Best Quality Drive Recording

The camera records in 1080p Full HD with 30 frames per second and features the Sony Exmores Starvis image sensor for excellent recording quality even at night. GPS geo-information and driving speed are recorded as well.

Driver Warnings and Support

This camera is packed with additional technology to support you while driving and keep you safe. Lane departure warning alerts you of if your vehicle moves out of its lane. Forward Collision Warning helps to prevent or reduce the severity of a collision. Front Vehicle Departure Notification lets the driver know the vehicle in front is pulling away from an intersection. You can also upload a speed camera database to the DVR-F800PRO to receive warnings when you approach a speed camera or red light camera.

Day and Night Vehicle Surveillance

The DVR-F800PRO includes parking mode that keeps your car under surveillance even at night. If any impact by another car, bike, etc is noted, the camera will store this video footage and you can review it later to identify and proof what happened.

- 1080p Full HD Recording
